Talkback Earpieces

TV Presenter Earpiece

The Universal range of talk back earpieces allows the user to choose the most appropriate device to suit their individual circumstances.

The following custom earpieces require an impression of the ear. This procedure should be undertaken by a professional audiologist who will examine the ear at the same time. This ensures that there are no ear conditions present that would prevent the impression being taken or the earpiece being worn. You can choose to either supply your own impression or Universal can take a suitable impression at their premises. Please contact us for further advice.

Custom Open Vented Earpieces

In situations where ambient noise levels are low to moderate, such as in a TV studio, the Open Vented Earpiece normally the ideal choice. This earpiece combines the benefit of a perfect fit and superb comfort alongside the advantage of having balanced hearing without blocking external sounds whilst wearing the device. The open aspect can be varied according to requirements.

Custom Noise Cancelling Earpieces

Where surrounding noise levels are high it is necessary to block out or greatly reduce outside sound in order to hear the sound fed through the earpiece while at the same time protecting the ear from damage.

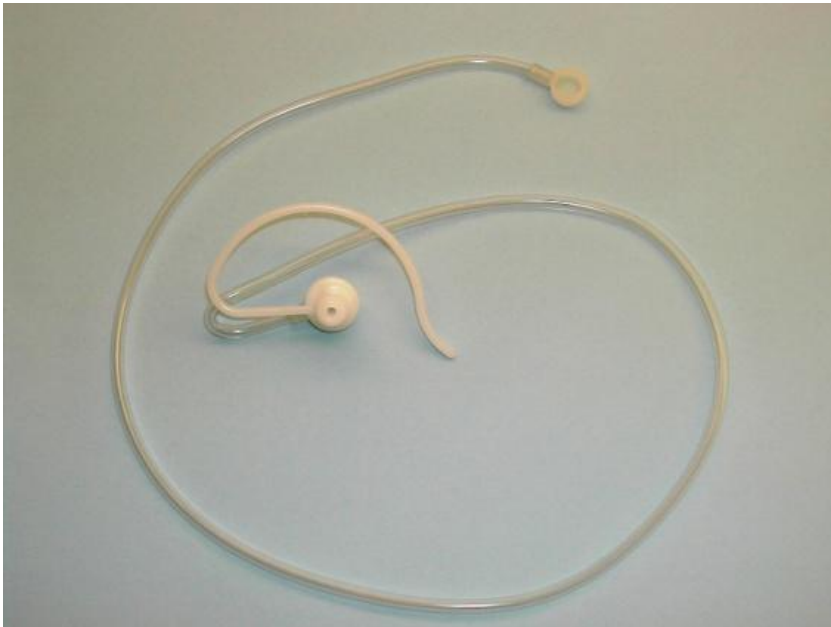

Made from comfortable soft silicone material

This type of earpiece is especially useful for security staff working at noisy events such as concerts and night clubs. This earpiece is often combined with a Noise Plug in the opposite ear to protect both ears from the high noise levels.

Generic Earpieces

The advantage of generic earpieces is that an impression is not required. Although the earpiece is not customised to the ear canal, the fittings are comfortable and quite suitable for many applications, especially when it is only to be worn for short periods of time.

- Super Uniduct - Generic communication ear piece with comfy soft mushroom shaped ear tip
- Delux Uniduct- Communication ear piece with moulded Generic tip and ear loop
